

H3500 WATER FILTER- 5 STAGE REVERSE OSMOSIS

The Hague WaterMax H3500 drinking water system can provide the highest quality of water right from your faucet. Get peace of mind while giving your family the best with a new RO filter.

- Proven to reduce arsenic, fluoride, chromium+6, lead, and more.
- Pre-filter removes chlorine, sediment, and other particles to prolong the life of the membrane cartridge.
- The membrane filter provides microscopic contaminant reduction
- Non-electric pump fills the tank five times faster than conventional RO systems
- Pre-tested for quality and assurance.
- Filters down to .0001 micron.

1 Stage 1 & 2

DUAL FUNCTION PRE-FILTER

Reduces suspended and particulate matter from incoming tap water down to 1 micron. Also reduces chlorine/chloramines taste and odor before passing through the RO membrane.

3 REVERSE OSMOSIS MEMBRANE

Semi-permeable membrane targets and reduces 13 contaminants, including fluoride, nitrates, nitrites, lead, radium and arsenic. Also reduces remaining suspended solids and dissolved solids from the water molecules. Then, these separated impurities are washed down the drain.

4 PROLONGED CONTACT FILTER

A specially designed filter that further reduces aesthetic chlorine from your water.

5 GAC (Granular Activated Carbon) BLOCK

One final filtration pass to reduce any additional objectionable tastes and odors.
